

CHALLENGE

Achieve cost and operational efficiency across locations

Americold is a global provider of cold storage warehouses and logistics. They came to us hoping to capture cost savings by optimizing their waste and recycling services, and to gain greater access and transparency into the waste streams of all their locations, using our robust reporting software.

SOLUTION

Optimized service schedules, eliminated unnecessary haul charges, and ensured maximum payload efficiency for each location

We analyzed haul schedules and resulting tonnages, and worked with the customer to reorient equipment and eliminate unnecessary containers, which reduced costs.

RESULTS

Optimization

Through the first round of service optimization, Rubicon identified **savings in excess of 11%**, with an additional 8% available through a second round of optimization.

Implementation

Americold awarded Rubicon service at all locations they subsequently acquired with the intent of driving optimized, efficient service and cost.
