

Single Stream Recycling

Save money and differentiate your brand.

Our single stream recycling (SSR), or mixed recycling, services enable customers to commingle commonly recyclable materials, such as paper, plastic, metal and glass, all in one container — making recycling easy and efficient for employees and consumers.

1

Determine volume and objectives to assess rebate potential; evaluate local infrastructure; identify solutions, equipment and frequency.

2

Provide solutions sourcing to procure vendors and determine end destinations that give recyclable materials most value.

3

Manage the physical setup of all vendor services; confirm equipment delivery and pickup schedules for each customer site.

4

Receive, process and confirm service requests through RUBICONConnect, Rubicon's customer app and web-based portal.

5

Consolidate invoices processing by capturing weights via tracking software; confirm accuracy and manage payments.

6

Generate verified reporting on landfill diversion by location; review consolidated raw data on tonnage of material diverted for sustainability certifications.
